Rutherford's Atomic Model

Sign Language Cards • Physics • Grade 11

Gestures marked 'Suggested' were drafted by AI. A Deaf educator or NSL signer must check them before use.

alpha particle

Suggested: please check

tiny charged particle

Gesture: Start with a fist (representing a particle), then open your hand to show a small, charged particle, moving it slightly forward to indicate movement.

gold foil

Suggested: please check

thin gold sheet

Gesture: Start with both hands flat, palms facing down, and fingers slightly apart. Quickly flick both hands outward as if throwing gold foil away.

nucleus

Suggested: please check

center part of atom

Gesture: Start with a flat hand facing down, then bring the thumb to touch the base of the palm while the other fingers remain straight, indicating the central part of something. This sign is adapted to represent the nucleus of an atom.

Add a photo or video of the sign here

bounced back

Suggested: please check

hit and returned

Gesture: Start with a fist, then extend your index and middle fingers while bringing your hand upwards and back, simulating a bouncing motion.
